DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 25-28, drawn to bandwidth regulation over multiple memories, classified in class 709, subclass 238, class 710, subclass 107, and class 711, subclasses 150 and 173.
- II. Claims 10-22, drawn to network bus bandwidth regulation, classified in class 365, subclass 189.04, class 709, subclass 238, and class 710, subclass 107.
- III. Claims 23 and 24, drawn to simultaneous access regulation, classified in class 711, subclasses 150, 167, and 168.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group III does not require memory partitioning, bandwidth regulation, or

hardware component design. The subcombination has separate utility such as access timing of concurrent access requests.

Because these inventions are distinct for the reasons given above and the search required for Group I and Group II is not required for Group III, restriction for examination purposes as indicated is proper.
